

Standard Specification for Concrete Structures -2002 “Materials and Construction”

CONTENTS

CHAPTER 1 GENERAL

- 1.1 Scope
- 1.2 Structure design stage
- 1.3 Designed service life
- 1.4 Safety factors
- 1.5 Construction planning stage
- 1.6 Concrete production
- 1.7 Construction Stage
- 1.8 Definitions

CHAPTER 2 DURABILITY VERIFICATION OF CONCRETE STRUCTURE

- 2.1 General
- 2.2 Verification for carbonation
- 2.3 Verification for reinforcing bar corrosion caused by the ingress of chloride ions
- 2.4 Verification for freezing-thawing action
- 2.5 Verification for chemical attack
- 2.6 Verification for alkali-aggregate reaction
- 2.7 Verification for water tightness
- 2.8 Verification for fire resistance

CHAPTER 3 CONSTRUCTION PLAN

- 3.1 Construction plan
- 3.2 Construction plan for concreting work
- 3.3 Setting of construction methods
- 3.4 Verification of construction plan on concreting work
- 3.5 Change in construction plan

CHAPTER 4 VERIFICATION OF CRACKING AT CONSTRUCTION STAGE

- 4.1 General
- 4.2 Verification of cracking due to cement hydration
 - 4.2.1 General
 - 4.2.2 Thermal analysis
 - 4.2.3 Design values of thermal properties
 - 4.2.4 Stress analysis
 - 4.2.5 Design values of mechanical properties of concrete
- 4.3 Verification of cracking due to drying shrinkage

CHAPTER 5 PERFORMANCE OF CONCRETE FOR CONSTRUCTION

- 5.1 General
- 5.2 Workability
- 5.3 Pumpability
- 5.4 Setting characteristics
- 5.5 Required strength during construction

CHAPTER 6 MIX PROPORTIONS

6.1 General

6.2 Constituent materials

6.2.1 General

6.2.2 Cements

6.2.3 Water

6.2.4 Fine aggregate

6.2.4.1 General

6.2.4.2 Physical properties for fine aggregate

6.2.4.3 Grading

6.2.4.4 Limit of deleterious substances

6.2.4.5 Chemical and physical soundness

6.2.4.6 Sea sand

6.2.4.7 Crushed sand

6.2.4.8 Slag fine aggregate

6.2.5 Coarse Aggregate

6.2.5.1 General

6.2.5.2 Physical properties for coarse aggregate

6.2.5.3 Grading

6.2.5.4 Limit of deleterious substances

6.2.5.5 Chemical and physical soundness

6.2.5.6 Crushed stone

6.2.5.7 Blast-furnace slag coarse aggregate

6.2.6 Admixtures

6.2.6.1 General

6.2.6.2 Mineral admixtures

6.2.6.3 Chemical admixtures

6.3 Mix proportions

6.4 Verification of concrete performance

6.4.1 General

6.4.2 Verification for compressive strength

6.4.3 Verification for carbonation rate

6.4.4 Verification for the diffusion coefficient of chloride ions in concrete

6.4.5 Verification for relative dynamic modulus of elasticity

6.4.6 Verification for resistance to chemical attack

6.4.7 Verification for resistance to alkali aggregate reaction

6.4.8 Verification for the coefficient of water permeability of concrete

6.4.9 Verification for fire resistance

6.4.10 Verification for adiabatic temperature rise

6.4.11 Verification for drying shrinkage characteristics

6.4.12 Verification for setting characteristic

CHAPTER 7 CONCRETE PRODUCTION

7.1 General

7.2 Production plant

7.2.1 Storage facilities

7.2.2 Batching equipment

7.2.3 Mixers

7.3 Batching

7.4 Mixing

- 7.5 Superplasticizing of concrete
- 7.6 Transportation to construction site

CHAPTER 8 READY-MIXED CONCRETE

- 8.1 General
- 8.2 Choice of concrete plant
- 8.3 Specification of quality
- 8.4 Delivery and acceptance

CHAPTER 9 REINFORCEMENT

- 9.1 Selection of reinforcement
 - 9.1.1 General
 - 9.1.2 Steel Reinforcement
 - 9.1.2.1 Steel bar
 - 9.1.2.2 Prestressing steel
 - 9.1.2.3 Steel bars for structures
 - 9.1.3 Continuous fiber bars
 - 9.1.4 Other reinforcements
 - 9.2 Storage of reinforcement

CHAPTER 10 CONSTRUCTION

- 10.1 General
- 10.2 Preparation
- 10.3 Transportation, placing and compaction within construction site
 - 10.3.1 General
 - 10.3.2 Transportation within construction site
 - 10.3.2.1 General
 - 10.3.2.2 Concrete pump
 - 10.3.2.3 Bucket
 - 10.3.2.4 Concrete placers
 - 10.3.2.5 Belt conveyors
 - 10.3.2.6 Chute
 - 10.3.3 Placing
 - 10.3.4 Compaction
 - 10.3.5 Treatment of settlement cracks
- 10.4 Curing of concrete
 - 10.4.1 General
 - 10.4.2 Moist curing
 - 10.4.3 Temperature-controlled curing
 - 10.4.4 Protection against harmful effects
- 10.5 Joints
 - 10.5.1 General
 - 10.5.2 Horizontal construction joints
 - 10.5.3 Vertical construction joints
 - 10.5.4 Construction joints in columns and walls integrated with floor systems
 - 10.5.5 Construction joints in floor systems
 - 10.5.6 Construction joints in arch
 - 10.5.7 Expansion joints
 - 10.5.8 Joints to control cracking
- 10.6 Reinforcement
 - 10.6.1 General

- 10.6.2 Fabrication of reinforcement
- 10.6.3 Assembly of reinforcing bars
- 10.6.4 Joints in reinforcing bars
- 10.6.5 Erection of assembled reinforcing bars
- 10.7 Formwork and shoring
 - 10.7.1 General
 - 10.7.2 Load
 - 10.7.2.1 General
 - 10.7.2.2 Vertical loads
 - 10.7.2.3 Horizontal loads
 - 10.7.2.4 Lateral pressure of concrete
 - 10.7.2.5 Special loads
 - 10.7.3 Materials
 - 10.7.4 Design of formwork
 - 10.7.5 Design of shoring
 - 10.7.6 Preparation of formwork
 - 10.7.7 Preparation of shoring
 - 10.7.8 Removal of formwork and shoring
 - 10.7.9 Special formwork and shoring
 - 10.7.9.1 General
 - 10.7.9.2 Slipform
 - 10.7.9.3 Movable shores
- 10.8 Finishing
 - 10.8.1 General
 - 10.8.2 Finishing concrete surfaces
 - 10.8.3 Finishing for concrete surfaces subjected to abrasion
 - 10.8.4 Special finishing
- 10.9 Cold weather concreting
 - 10.9.1 General
 - 10.9.2 Transportation within construction site and placing
 - 10.9.3 Curing
 - 10.9.4 Formwork and shoring
- 10.10 Hot weather concreting
 - 10.10.1 General
 - 10.10.2 Transportation within construction site
 - 10.10.3 Placing
 - 10.10.4 Curing
- 10.11 Placing of mass concrete
 - 10.11.1 General
 - 10.11.2 Partitioning into blocks, lift height and joints
 - 10.11.3 Placing
 - 10.11.4 Curing
 - 10.11.5 Formwork
 - 10.11.6 Crack-inducing joints

CHAPTER 11 INSPECTION

- 11.1 General
- 11.2 Inspection plan
- 11.3 Inspection for acceptance of constituent materials of concrete
 - 11.3.1 General
 - 11.3.2 Cements

- 11.3.3 Mixing water
- 11.3.4 Aggregates
- 11.3.5 Admixtures
- 11.4 Inspection of production
 - 11.4.1 Inspection of production facilities
 - 11.4.2 Inspection of production process
- 11.5 Inspection for acceptance of concrete at delivery
- 11.6 Inspection for acceptance of reinforcement at delivery
- 11.7 Inspection of construction
 - 11.7.1 Inspection of concreting
 - 11.7.2 Inspection of reinforcement
 - 11.7.2.1 Inspection of fabrication and assembly of reinforcing bars
 - 11.7.2.2 Inspection of joint of reinforcing bars
 - 11.7.3 Inspection of formwork and shoring
- 11.8 Inspection of structures
 - 11.8.1 General
 - 11.8.2 Inspection of surface texture
 - 11.8.3 Inspection of position, shape and dimension of concrete members
 - 11.8.4 Inspection of concrete properties in structure
 - 11.8.5 Inspection of the cover
 - 11.8.6 Loading test of member and structure

CHAPTER 12 CONSTRUCTION RECORDS

- 12.1 General

CHAPTER 13 PRESTRESSED CONCRETE

- 13.1 General
 - 13.1.1 Scope
 - 13.1.2 General requirements
- 13.2 Planning for construction
- 13.3 Performance requirements for concrete works
 - 13.3.1 Required compressive strength of concrete at the time of prestressing
- 13.4 Required performance of grout
 - 13.4.1 General requirements
 - 13.4.2 Consistency
 - 13.4.3 Bond strength between concrete and tendons
 - 13.4.4 Corrosion resistance of steel
- 13.5 Proportioning of grout mix
 - 13.5.1 Grout for prestressed concrete
 - 13.5.2 Proportions
 - 13.5.3 Verification of performance of grout
 - 13.5.3.1 Verification of consistency
 - 13.5.3.2 Verification of bond strength between concrete and tendons
 - 13.5.3.3 Verification of corrosion resistance of steel
- 13.6 Materials other than reinforcing materials
 - 13.6.1 Anchorages and couplers
 - 13.6.2 Sheaths
 - 13.6.3 Selection of protecting duct
 - 13.6.4 Coating material for unbonded tendons
 - 13.6.5 Material for jointing precast concrete members
 - 13.6.6 Friction-reducing agents

13.6.7 Storage of materials

13.7 Execution

13.7.1 Installation of Tendons

13.7.1.1 Cutting, bending and placing of prestressing steel

13.7.1.2 Installation of sheaths, protecting tubes and tendons

13.7.1.3 Formation of ducts

13.7.1.4 Assembly and installation of anchorages, couplers and deviating devices

13.7.1.5 Layout of openings for grouting, exhaust and discharging

13.7.2 Formwork and shoring

13.7.3 Casting and compaction of concrete

13.7.4 Prestressing

13.7.4.1 General requirement

13.7.4.2 Calibration of tensioning equipments

13.7.4.3 Control of prestressing

13.7.4.4 Protection of anchorages and end surfaces of members

13.7.5 Grouting

13.7.5.1 General requirement

13.7.5.2 Mixing and agitating

13.7.5.3 Grouting

13.7.5.4 Treatment of injection inlet, openings for air vent and grout discharge

13.7.5.5 Grouting in cold weather

13.7.5.6 Grouting in hot weather

13.7.6 Manufacture and construction of precast members

13.7.6.1 Manufacture

13.7.6.2 Transportation

13.7.6.3 Storage

13.7.6.4 Jointing

13.7.6.5 Erection

13.8 Inspection

13.8.1 Inspection of grout

13.8.1.1 Inspection for grout quality

13.8.1.2 Inspection of grouting

13.8.2 Acceptance test of other materials

13.8.2.1 Anchorage and coupler

13.8.2.2 Sheaths

13.8.2.3 Materials for jointing members

13.8.3 Inspection of execution

13.8.3.1 Inspection of sheaths, protecting tubes and tendon arrangements

13.8.3.2 Inspection of anchorage and coupler assembly and arrangement

13.8.3.3 Inspection of opening layout for grouting, exhaust and discharging

CHAPTER 14 COMPOSITE STEEL AND CONCRETE STRUCTURES

14.1 General

14.1.1 Scope of application

14.1.2 Construction planning for composite steel and concrete structures

14.2 Materials

14.3 Compactability of concrete

14.3.1 Specification of compactability

14.3.2 Verification of compactability

14.3.3 Steel members

14.4 Production of steel member

- 14.4.1 Processing of steel member
- 14.4.2 Welding in factory
- 14.4.3 Temporary assembly and transportation
- 14.5 Erection of steel members
 - 14.5.1 Erection
 - 14.5.2 Temporary placement and assembly of steel members
 - 14.5.3 Jointing using high-strength bolts
 - 14.5.4 Welding in construction site
- 14.6 Construction
 - 14.6.1 Concreting
- 14.7 Inspection
 - 14.7.1 General
 - 14.7.2 Inspection for acceptance
 - 14.7.2.1 Inspection for acceptance of steel
 - 14.7.2.2 Inspection for acceptance of jointing materials
 - 14.7.2.3 Inspection for acceptance of concrete
 - 14.7.3 Inspection for production of steel members
 - 14.7.3.1 Inspection of welding in factory
 - 14.7.3.2 Inspection for site welding
 - 14.7.3.3 Inspection for tightening of high-strength bolt
 - 14.7.4 Inspection of construction
 - 14.7.4.1 Inspection for filling condition of concrete

CHAPTER 15 CONCRETE PRODUCTS

- 15.1 General
 - 15.1.1 Scope
 - 15.1.2 General requirements
- 15.2 Quality of constituent concrete materials and mix proportions
 - 15.2.1 Quality of constituent concrete materials
 - 15.2.1.1 Fine and coarse aggregates
 - 15.2.1.2 Admixtures
 - 15.2.2 Mix Proportions
 - 15.2.2.1 General
 - 15.2.2.2 Workability
 - 15.2.2.3 Strength of concrete products
- 15.3 Reinforcing steel and other materials
- 15.4 Placing and construction
 - 15.4.1 Mixing
 - 15.4.2 Assembly of reinforcement
 - 15.4.3 Formwork
 - 15.4.4 Molding
 - 15.4.5 Curing
 - 15.4.6 De-molding and pre-stressing
 - 15.4.7 Handling, transportation and storage
 - 15.4.8 Erection and jointing
- 15.5 Inspection
 - 15.5.1 General
 - 15.5.2 Inspection of concrete products

CHAPTER 16 HIGH-STRENGTH CONCRETE

- 16.1 Scope

- 16.2 Determination of performance
 - 16.2.1 General
 - 16.2.2 Workability
 - 16.2.3 Pumpability
 - 16.2.4 Strength
 - 16.2.5 Resistance to alkali aggregate reactivity
- 16.3 Mix design
 - 16.3.1 Aggregate
 - 16.3.2 Mix proportioning
 - 16.3.3 Verification of performance
 - 16.3.3.1 Verification of workability
 - 16.3.3.2 Verification for pumpability
 - 16.3.3.3 Verification for strength
 - 16.3.3.4 Verification for resistance to alkali aggregate reactivity
- 16.4 Construction
- 16.5 Inspection

CHAPTER 17 LIGHTWEIGHT AGGREGATE CONCRETE

- 17.1 Scope
- 17.2 Determination of essential performance
 - 17.2.1 General
 - 17.2.2 Bulk density
 - 17.2.3 Freeze-thaw resistance
 - 17.2.4 Pumpability
- 17.3 Mix design
 - 17.3.1 Lightweight aggregate
 - 17.3.2 Mix proportioning
 - 17.3.2.1 Slump
 - 17.3.2.2 Air content
 - 17.3.2.3 Format of data sheet for mix proportion
- 17.4 Performance verification
 - 17.4.1 Verification of bulk density
 - 17.4.2 Verification of freeze-thaw resistance
 - 17.4.3 Verification of pumpability
- 17.5 Production and placing
 - 17.5.1 Transportation and storage of lightweight aggregates
 - 17.5.2 Control of moisture content of lightweight aggregate
 - 17.5.3 Mixing
 - 17.5.4 Transportation within the construction site
 - 17.5.5 Ready-mixed concrete
 - 17.5.6 Placing
 - 17.5.7 Compaction
 - 17.5.8 Surface finishing
- 17.6 Inspection for qualities of aggregate and concrete
 - 17.6.1 Inspection for quality of lightweight aggregate
 - 17.6.2 Bulk density of concrete

CHAPTER 18 HIGH –FLUIDITY CONCRETE

- 18.1 Scope
- 18.2 Self-compactability
- 18.3 Mix design

- 18.3.1 Materials
- 18.3.2 Mix proportioning
- 18.3.3 Format of data sheet for mix proportions
- 18.4 Verification of self-compactability
- 18.5 Production and construction
 - 18.5.1 General
 - 18.5.2 Production
 - 18.5.3 Quality control during production
 - 18.5.4 Transporting, placing, finishing, curing and construction joints
 - 18.5.5 Formwork
- 18.6 Inspection of self-compactability

CHAPTER 19 EXPANSIVE CONCRETE

- 19.1 Scope
- 19.2 Determination of performance
 - 19.2.1 General
 - 19.2.2 Expansion of concrete
 - 19.2.3 Strength
- 19.3 Mix design
 - 19.3.1 Quality of materials
 - 19.3.1.1 Cement
 - 19.3.1.2 Expansive admixture
 - 19.3.2 Mix proportioning
 - 19.3.3 Verification of performance
 - 19.3.3.1 Verification of expansion
 - 19.3.3.2 Verification of strength
- 19.4 Production and construction
 - 19.4.1 Mixing
 - 19.4.2 Curing
- 19.5 Inspection
 - 19.5.1 Inspection for acceptance of concrete at delivery

CHAPTER 20 STEEL FIBER REINFORCED CONCRETE

- 20.1 Scope
- 20.2 Performance specification
 - 20.2.1 General
 - 20.2.2 Strength properties
 - 20.2.2.1 Compressive strength
 - 20.2.2.2 Tensile strength
 - 20.2.2.3 Flexural strength
 - 20.2.3 Deformation characteristics
 - 20.2.3.1 Deformation characteristics on the compression side
 - 20.2.3.2 Tension softening properties
 - 20.2.3.3 Flexural toughness
 - 20.2.4 Other performances
- 20.3 Design of mix proportion
 - 20.3.1 Steel fibers
 - 20.3.2 Mix proportion
- 20.4 Performance verification
 - 20.4.1 Verification of strength properties
 - 20.4.1.1 Verification of compressive strength

- 20.4.1.2 Verification of tensile strength
- 20.4.1.3 Verification of flexural strength
- 20.4.2 Verification of deformation properties
 - 20.4.2.1 Verification of deformation properties on the compression side
 - 20.4.2.2 Verification of tension softening properties
 - 20.4.2.3 Verification of flexural toughness
- 20.4.3 Verification of other performances
- 20.5 Production and placement/application
 - 20.5.1 Fiber addition and mixing
 - 20.5.2 Transportation
- 20.6 Inspection
 - 20.6.1 Inspection for acceptance of steel fibers
 - 20.6.2 Inspection for acceptance of concrete at delivery

CHAPTER 21 CONCRETE USING CONTINUOUS FIBER REINFORCING MATERIALS (CFRM)

- 21.1 General
 - 21.1.1 Scope
 - 21.1.2 General requirements
- 21.2 Verification of durability of concrete using CFRM
- 21.3 Selection of reinforcing and other materials
 - 21.3.1 Reinforcing steel bars
 - 21.3.2 Anchorages and couplers
 - 21.3.3 Tendon coating materials and tendon protection materials
- 21.4 Construction
 - 21.4.1 General
 - 21.4.2 Handling and storage of materials
 - 21.4.3 Shaping, assembly and placing in position of CFRM tendons, CFRM reinforcements etc.
 - 21.4.3.1 Shaping and assembly of CFRM tendons
 - 21.4.3.2 Shaping and assembly of CFRM reinforcement
 - 21.4.3.3 Making ducts other than sheaths
 - 21.4.3.4 Placing sheaths and CFRM tendons
 - 21.4.4 Placement of concrete
 - 21.4.5 Prestressing
- 21.5 Inspection
 - 21.5.1 Inspection for acceptance of CFRM tendons
 - 21.5.2 Inspection for protection of CFRM

CHAPTER 22 UNDERWATER CONCRETE

- 22.1 General
 - 22.1.1 Scope
 - 22.1.2 General requirements
- 22.2 Determination of essential performances
 - 22.2.1 General
 - 22.2.2 Strengths
 - 22.2.3 Resistance to segregation under water
 - 22.2.4 Flowability
- 22.3 Mix design
 - 22.3.1 Materials
 - 22.3.1.1 Chemical admixtures used for antiwashout underwater concrete

- 22.3.2 Mix proportions
- 22.3.3. Performance verification
 - 22.3.3.1 Verification of strength
 - 22.3.3.2 Verification of resistance to segregation under water
 - 22.3.3.3 Verification of flowability
- 22.4 Construction
 - 22.4.1 Methods of placing normal underwater concrete
 - 22.4.2 Placing of antiwashout underwater concrete
 - 22.4.3 Placing of underwater concrete for cast-in place concrete piles and cast-in place diaphragm walls
- 22.5 Inspection
 - 22.5.1 Inspection of concrete
 - 22.5.2 Inspection of concreting

CHAPTER 23 PRE-PLACED AGGREGATE CONCRETE

- 23.1 General
 - 23.1.1 Scope
 - 23.1.2 General requirements
- 23.2 Determination of essential performance
 - 23.2.1 General
 - 23.2.2 Determination of essential performance of pre-placed aggregate concrete
 - 23.2.2.1 Strength
 - 23.2.3 Determination of essential performance of mortar used for grouting
 - 23.2.3.1 Flowability
 - 23.2.3.2 Segregation to resistance
 - 23.2.3.3 Expansion
- 23.3 Mix design
 - 23.3.1 Materials
 - 23.3.1.1 Coarse aggregate
 - 23.3.1.2 Materials used in mortar used for grouting
 - 23.3.2 Mix proportions
 - 23.3.2.1 General
 - 23.3.2.2 Format for giving mix proportions
 - 23.3.3 Performance verification
 - 23.3.3.1 Verification of strength
 - 23.3.3.2 Verification of flowability
 - 23.3.3.3 Verification of resistance to segregation
 - 23.3.3.4 Verification of expansibility
- 23.4 Production and Placing
 - 23.4.1 Production and placing of grout mortar
 - 23.4.1.1 Production plant
 - 23.4.1.2 Mixing
 - 23.4.2 Construction and control
 - 23.4.2.1 Shuttering
 - 23.4.2.2 Charging coarse aggregate
 - 23.4.2.3 Grouting equipment and injection pipes
 - 23.4.2.4 Pumping
 - 23.4.2.5 Grouting
 - 23.4.2.6 Construction joints
 - 23.4.2.7 Construction in cold weather
 - 23.4.2.8 Construction in hot weather

23.5 Inspection

- 23.5.1 General
- 23.5.2 Inspection of materials for mortar for grouting
- 23.5.3 Inspection of pre-placed aggregate concrete and mortar for grouting
- 23.5.4 Inspection of construction

CHAPTER 24 SHOTCRETE

24.1 General

- 24.1.1 Scope
- 24.1.2 General

24.2 Determination of essential performance

- 24.2.1 General
- 24.2.2 Placing performances
- 24.2.3 Long-term strength of shotcrete

24.3 Mix Proportions

- 24.3.1 General
- 24.3.2 Concrete materials
- 24.3.3 Mix design

24.4 Performance verification

- 24.4.1 Verification of placing performances
- 24.4.2 Verification of long-term strength of shotcrete

24.5 Production

- 24.5.1 General
- 24.5.2 Production equipment
- 24.5.3 Shotcreting machine and auxiliary equipment
- 24.5.4 Production procedure

24.6 Reinforcement

- 24.6.1 Wire fabric
- 24.6.2 Fibers
- 24.6.3 Storage of reinforcement

24.7 Execution

- 24.7.1 General
- 24.7.2 Surface preparation
- 24.7.3 Reinforcement placing
- 24.7.4 Shotcrete application
 - 24.7.4.1 General
 - 24.7.4.2 Application to arches and side walls
 - 24.7.4.3 Shotcreting on water ingress
 - 24.7.4.4 Application to inverts
- 24.7.5 Measures against dusting
- 24.7.6 Curing

24.8 Inspection

- 24.8.1 Acceptance inspection of concrete materials
- 24.8.2 Concrete inspection
- 24.8.3 Inspection of concrete work
 - 24.8.3.1 Inspection of shotcrete application
 - 24.8.3.2 Inspection of application thickness
 - 24.8.3.3 Inspection of underground environment for shotcreting

APPENDIX I MIX PROPORTIONING METHOD OF CONCRETE

APPENDIX II FORM FOR EXPRESSING MIX PROPORTIONS
