

Standard Specifications for Concrete Structures -2002

“Structural Performance Verification”

CONTENTS

CHAPTER 1 GENERAL	1
1.1 Scope.....	1
1.2 Definitions.....	3
1.3 Notation.....	6
CHAPTER 2 BASIS OF DESIGN.....	12
2.1 General.....	12
2.2 Design life.....	13
2.3 Prerequisite of verification.....	13
2.4 Verification principles.....	14
2.5 Calculation of member forces and the capacity of member cross sectional capacities	16
2.6 Safety factors.....	16
2.7 Modification factors.....	19
2.8 Documentation of design calculations	20
2.9 Design drawings.....	20
CHAPTER 3 DESIGN VALUES FOR MATERIALS.....	22
3.1 General.....	22
3.2 Concrete	24
3.2.1 Strength	24
3.2.2 Design fatigue strength	27
3.2.3 Stress-strain curve	29
3.2.4 Tension softening properties	31
3.2.5 Young's modulus	32
3.2.6 Poisson's ratio.....	32
3.2.7 Thermal characteristics	32
3.2.8 Shrinkage	34
3.2.9 Creep	39
3.2.10 Influence of low temperature	42
3.3 Reinforcing steel	43
3.3.1 Strength	43
3.3.2 Design fatigue strength	44
3.3.3 Stress-strain curve	47
3.3.4 Young's modulus	48
3.3.5 Poisson's ratio.....	48
3.3.6 Coefficient of heat expansion	48
3.3.7 Relaxation ratio of prestressing steel	49
3.3.8 Influence of low temperature	51
CHAPTER 4 LOAD	52
4.1 General.....	52
4.2 Characteristic values of loads	53
4.3 Load factors.....	54
4.4 Kinds of load.....	55
4.4.1 Dead load	55
4.4.2 Live load	56

4.4.3	Earth pressure.....	56
4.4.4	Hydrostatic water pressure, fluid dynamic force and wave actions.....	57
4.4.5	Effect of temperature	58
4.4.6	Wind load	59
4.4.7	Snow load.....	60
4.4.8	Prestress	61
4.4.9	Shrinkage and creep of concrete	61
4.4.10	Loads during construction stage	61
4.4.11	Other loads	61

CHAPTER 5 STRUCTURAL ANALYSIS 62

5.1	General.....	62
5.2	Calculation of structural response for examination of ultimate limit state.....	63
5.3	Calculation of structural response for examination of serviceability limit state.....	65
5.4	Calculation of structural response for examination of fatigue limit state.....	65

CHAPTER 6 VERIFICATION OF STRUCTURAL SAFETY..... 66

6.1	General.....	66
6.2	Flexural moment and axial forces	69
6.2.1	Design capacity of member cross section	69
6.2.2	Structural details	72
6.3	Shear.....	74
6.3.1	General.....	74
6.3.2	Design shear forces of linear members	75
6.3.3	Design shear capacity of linear members	76
6.3.4	Design punching shear capacity of planar members.....	83
6.3.5	Design member forces in planar members subjected to in-plane forces.....	86
6.3.6	Design capacity of planar members subjected to in-plane forces.....	86
6.3.7	The design capacity for shear transfer	88
6.3.8	Structural details	92
6.4	Torsion	93
6.4.1	General.....	93
6.4.2	Design torsional capacity for members without torsion reinforcement.....	94
6.4.3	Design torsional capacity for members with torsion reinforcement.....	97
6.4.4	Structural details	103
6.5	Rigid body stability.....	105

CHAPTER 7 VERIFICATION OF SERVICEABILITY 107

7.1	General.....	107
7.2	Computation of stresses	107
7.3	Limiting value of stresses	108
7.4	Examination for cracking.....	109
7.4.1	General.....	109
7.4.2	Permissible crack width	111
7.4.3	Classification of environmental conditions	113
7.4.4	Examination for flexural cracks.....	114
7.4.5	Examination for concentration of chloride ions at the location of the reinforcement.....	117
7.4.6	Examination for shear cracks.....	120
7.4.7	Examination for cracks due to torsion	121
7.4.8	Structural details	123
7.5	Examination for displacement and deformation	123

7.5.1	General.....	123
7.5.2	Permissible displacement and deformation.....	124
7.5.3	Examination for displacement and deformation	124
7.6	Examination for vibration	130
CHAPTER 8 VERIFICATION OF FATIGUE RESISTANCE		131
8.1	General.....	131
8.2	Examination of safety for fatigue.....	131
8.3	Design variable force and equivalent number of cycles	132
8.4	Computation of stress due to variable load.....	134
8.5	Fatigue strength of concrete members without shear reinforcement	135
CHAPTER 9 GENERAL STRUCTURAL DETAILS		137
9.0	Notation.....	137
9.1	General.....	137
9.2	Concrete cover	138
9.3	Clear distance.....	142
9.4	Bend configurations of reinforcement	143
9.4.1	Standard hooks.....	143
9.4.2	Longitudinal reinforcement.....	144
9.4.3	Stirrup, tie and hoop.....	144
9.4.4	Intermediate tie	145
9.4.5	Other reinforcement	146
9.5	Development of reinforcement	147
9.5.1	General.....	147
9.5.2	Performance of anchorages of reinforcement in concrete	149
9.5.2.1	Performance characteristics to be examined.....	149
9.5.2.2	Examination method	150
9.5.2.3	Static strength.....	151
9.5.2.4	Resistance to repeated high stresses.....	152
9.5.2.5	Resistance to fatigue to high cycle.....	153
9.5.2.6	Reliability of execution and other conditions	153
9.5.3	Critical sections to check development of reinforcement.....	154
9.5.4	Development length for reinforcement.....	156
9.5.5	Basic development length	158
9.6	Splices in reinforcement.....	159
9.6.1	General.....	159
9.6.2	Lap Splices.....	160
9.6.3	Performance of splices of reinforcement in concrete.....	162
9.6.3.1	Performance characteristics to be examined.....	162
9.6.3.2	Examination method	163
9.6.3.3	Static strength.....	164
9.6.3.4	Resistance to repeated high stresses.....	165
9.6.3.5	Resistance to high cycle fatigue.....	165
9.6.3.6	Reliability of execution and other conditions	166
9.7	Beveling.....	166
9.8	Additional reinforcement for exposed surfaces	166
9.9	Reinforcing for concentrated reactions	167
9.10	Reinforcing for openings	167
9.11	Construction joints	167
9.12	Expansion joints.....	168
9.13	Water-tight structures.....	168

9.14	Drainage and water proofing.....	168
9.15	Protection of concrete surface.....	169
9.16	Haunches.....	169
CHAPTER 10 PRESTRESSED CONCRETE.....		170
10.0	Notation.....	170
10.1	General.....	172
10.2	Classification of prestressed concrete.....	173
10.3	Prestress force.....	174
10.4	Serviceability limit state.....	178
10.4.1	Flexural moments and axial forces.....	178
10.4.2	Examination for shear and torsion.....	183
10.5	Examination for ultimate limit state.....	185
10.6	Examination for fatigue limit state.....	186
10.7	Examination during construction.....	186
10.8	Durability.....	188
10.9	Structural details.....	189
10.9.1	Prestressing tendons.....	189
10.9.2	Minimum amount of reinforcement.....	193
10.9.3	Additional reinforcement.....	193
10.9.4	Precast concrete members.....	194
CHAPTER 11 COMPOSITE STEEL AND CONCRETE STRUCTURE.....		199
11.1	General.....	199
11.2	General requirements for composite structures.....	201
11.3	Design method.....	202
11.3.1	Selection of steel.....	202
11.3.2	Verification method of performance.....	202
11.3.3	Shear connector.....	203
11.3.4	Examination of limit states during erection.....	203
11.4	Examination of completed structures containing some steel sections used during erection.....	204
11.5	Structural performance of joints and corners.....	204
11.6	Effect of shrinkage and creep of in-filled concrete.....	205
11.7	Steel reinforced concrete members.....	205
11.7.1	Classification of structural types.....	205
11.7.2	Examination of ultimate limit state.....	206
11.7.3	Examination of serviceability limit state.....	207
11.7.4	Examination of fatigue limit state.....	208
11.7.5	Structural details.....	208
11.8	Concrete filled steel columns.....	209
11.8.1	Examination of ultimate limit state.....	209
11.8.2	Examination of serviceability limit state.....	210
11.8.3	Examination of fatigue limit state.....	210
11.8.4	Examination for placing concrete.....	210
11.8.5	Structural details.....	210
11.9	Sandwich members.....	211
11.9.1	Examination of ultimate limit state.....	211
11.9.2	Examination of serviceability limit state.....	212
11.9.3	Examination of fatigue limit state.....	212
11.9.4	Structural details.....	213

CHAPTER 12 DESIGN OF MEMBERS.....	214
12.1 Beams.....	214
12.1.1 General.....	214
12.1.2 Span length.....	214
12.1.3 Effective compression flange widths of T beams	215
12.1.4 Isolated beams.....	216
12.1.5 Continuous beams	217
12.1.6 Structural details	218
12.1.7 Deep beams	218
12.1.8 Corbels	221
12.2 Columns	224
12.2.1 General.....	224
12.2.2 Slenderness ratio	224
12.2.3 Short column	224
12.2.4 Long column	225
12.2.5 Tied reinforced columns	225
12.2.6 Spiral reinforced columns	226
12.2.7 Splices of reinforcement	228
12.3 Rigid frames.....	228
12.3.1 General.....	228
12.3.2 Structural analysis	228
12.3.3 Structural details	230
12.4 Arches	231
12.4.1 General.....	231
12.4.2 Structural analysis	232
12.4.3 Structural details	233
12.5 Design of planar members	234
12.5.1 Scope and definitions	234
12.5.2 Structural analysis of planar members	234
12.5.3 Examination of ultimate limit state.....	235
12.5.4 Examination of serviceability limit state	235
12.5.5 Examination of fatigue limit state.....	235
12.5.6 Design of slab	235
12.5.6.1 Structural analysis	235
12.5.6.2 Examination for design for applied member forces.....	237
12.5.6.3 Examination for design of slabs having different shapes	239
12.5.6.4 Structural details	251
12.5.7 Design of footing	252
12.5.7.1 General.....	252
12.5.7.2 Structural analysis	252
12.5.7.3 Examination for flexural moment.....	253
12.5.7.4 Examination for shear	255
12.5.7.5 Examination for punching shear	257
12.5.7.6 Examination for pull-out shear	257
12.5.7.7 Structural details	259
12.5.8 Design of shells and walls.....	259
12.6 Precast concrete.....	263
12.6.1 General.....	263
12.6.2 Shrinkage and creep of precast concrete.....	263
12.6.3 Relaxation ratio of prestressing steel	264
12.6.4 Loads.....	264
12.6.5 Unit weight.....	265

12.6.6	Connection	265
12.6.7	Concrete cover	266
12.6.8	Clear distance between reinforcing bars	267

CHAPTER 13 STRUT-AND-TIE MODEL 268

13.1	General	268
13.2	Strength of ties	269
13.2.1	Strength of steel ties	269
13.2.2	Strength of concrete ties	269
13.3	Strength of struts	270
13.3.1	Strength of concrete struts	270
13.3.2	Strength of concrete struts with reinforcement	272
13.3.3	Strength of confined concrete struts	272
13.3.4	Reduction in strut thickness	272
13.4	Strength of nodes and anchorages of reinforcing bars	273
13.4.1	General	273
13.4.2	Compression nodes	273
13.4.3	Anchorage of reinforcing bars	273
